Rezil Inc.

## **Rezil Completes Acquisition of NTT Anode Energy's High-Voltage Bulk Power Receiving Business for Condominiums -Over 2,600 Condominiums Now Powered, Enhancing Value for Residents-**

TOKYO, January 31<sup>st</sup> 2025 — Rezil Inc., with its mission to make decarbonization effortless, announced that it plans to acquire the high-voltage bulk electricity supply service business for condominiums from NTT Anode Energy Co., Ltd. ("NTT Anode Energy"). [Please refer to "the announcement of the acquisition of the condominium electricity supply service (high-voltage bulk power supply service) from NTT Anode Energy", released on November 29, 2024.] We are pleased to announce that the transfer of this business, including the settlement of funds, has been completed following the review process by the relevant authorities. As a result of this business transfer, the number of condominium buildings to which our company supplies electricity has exceeded 2,600, and the number of households has exceeded 243,000.

### **Rezil Completes Acquisition of NTT Anode Energy's High-Voltage Bulk Power Receiving Business for Condominiums**

**-Over 2,600 Condominiums Now Powered-**

#### **The background of the acquisition and the prospects**

Leveraging our 30-year foundation, our company has been at the forefront of creating innovative digital business models within the power industry. With a mission to make decarbonization effortless, we are driving the development and delivery of services that empower individuals, businesses, and municipalities to contribute to a sustainable future without undue economic or psychological burden. Our core businesses include the

following: Distributed energy, which focuses on electricity supply services for condominium buildings; Green energy, providing renewable energy\* solutions to businesses and public entities; Digital transformation support, supporting the digital transformation of energy-related companies; and Decarbonization solutions, offering consulting services to facilitate decarbonization efforts.

Launched in 2004, our bulk electric power purchasing for condominiums has been a cornerstone of our business. We have been actively expanding this service, recognizing its growth potential. The recent acquisition of this business aligns with our strategy to enhance customer value by utilizing our accumulated expertise and knowledge. We are committed to maintaining the same high level of service for customers previously served by NTT Anode Energy.

In April 2023, we introduced a new “Emergency power reserve service” that utilizes our bulk electricity supply system to enhance both decarbonization and resilience. We will continue to develop innovative services tailored to customer needs, contributing to the safety and security of residents while establishing our envisioned “distributed energy platform” to stabilize Japan's energy supply and achieve a decarbonized society.

**Hozumi Tanji, Representative Director and President of Rezil, comments:**

We believe that this business transfer embodies our commitment to be a unifying force persistently tackling social challenges. By taking over the business established by NTT Anode Energy, we aim not only to foster our growth but also to honor the trust our customers have placed in us. We take great pride in this recognition of our ongoing efforts to serve them.

Our employees feel a sense of responsibility that exceeds even our recent listing on the stock exchange. As the new stewards of this mission, we will make every effort to provide exceptional services and seek continuous improvements.

We are now approaching a milestone of 3,000 buildings, which is our significant medium-term goal. Moving forward, we plan to connect and manage the batteries installed in condominiums through a network. This initiative will help reduce electricity costs and advance decarbonization efforts in Japan while delivering valuable services to consumers.

## Notes to editors

\*Including de facto renewable energy.

## About Rezil Inc.

To be “a unifying force, persistently tackling social challenges,” Rezil aims to realize a decarbonized society by leveraging its 30 years of power industry experience and integrating cutting-edge technology to optimize energy use.

Rezil’s mission, “We make decarbonization effortless,” has led it to establish four key business areas: Distributed energy, Green energy, Digital transformation support, and Decarbonization solutions. By offering convenient and reliable services, Rezil empowers companies, individuals, and local governments to contribute to decarbonization effortlessly in their daily lives, thus accelerating the transition to a carbon-neutral society.
